

## 02 Check information on the typhoon and rain!

Check new information on the typhoon and rain again and again after a typhoon has occurred.

### Typhoon information

Check the current location of the typhoon, where the typhoon is heading, how strong rain and winds will be, etc. on TV weather forecasts and the Japan Meteorological Agency's website.

### Rain information

You can find out rain and weather information on the River Flood Information and the Japan Meteorological Agency's website.

### The Japan Meteorological Agency's website

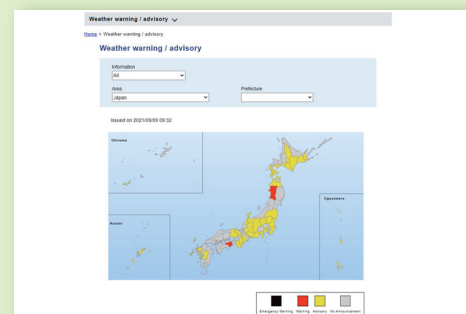

#### Homepage

#### Typhoon information

#### Information on advisories and warnings

### ↓ See the following websites.

Information

River Flood  
Information  
(Japanese)

The explanation is on P14.

## 03 Check the river levels!

- Even if the rain stops, river levels may increase and they might flood.
- Check the river levels to prepare before evacuation information is issued.

### Watch the river level

#### River Flood Information

You can watch via the QR code on P13.

Let's take a look at a water level gauge

Current river water level can be found on the map.

You can watch the river through the camera.

You can find detailed information on water level by clicking the 凡例 icon.

↑ What the above indicates: when the water level reaches 7.6 meters, "Evacuation of the elderly, etc." will be issued, and at 8.4 meters, "Evacuation instructions" will be issued.

### Water levels and Alert levels

Think about what to do when river levels increase.

**Emergency safety measures**

**Evacuation instructions**

**Evacuation of the elderly, etc.**

Alert level	Required actions
5	It is dangerous, as you cannot evacuate any longer.
<Make sure you evacuate at Alert Level 4.>	
4	Evacuate immediately.
3	Those who require more time to evacuate, such as the elderly, must evacuate.
